

Ques 1. What is lexical structure ?

Ans 1. Lexical Structure is defined rules and regulations on what you can do and in what way like how can be variable be defined what are the datatypes can be used etc.

Ques 2. What is Unicode ?

Ans 2. Unicode is a defined number for every character that exists irrespective of the platform, language etc.

Ques 3. Explain all the keywords present in the JavaScript with examples ?

Ans 3. Few keywords that are present in JS are :-

1. For :- for keyword is used for defining a for loop in js.
Ex :- `for(i=0; i<5; i++){ print("hello vikash") }`
2. Const :- const is used for defining a constant in js whose value cannot be changed in the entire code. Ex:- `const name = "Vikash"`

Ques 4. What are shorthand operators, explain with a suitable example ?

Ans 4. Short hand Operators are the short notation for a specific code that will be longer when written in a traditional format.

Ex:- `a = a + b;` can be written as `a += b;`

Ques 5. What is "use Strict" in JavaScript ?

Ans 5. Use Strict is used to make JS more strict in nature like other languages, like we have to define a variable first then it can be used when using strict mode , else the variable can be directly assigned and during compilation JS will auto initialize it. This is used to write more secure js.
